

V2-raketterne

Der findes på nettet en meget omfattende information om V2 raketterne. Gå selv på opdagelse – start evt med den engelske wikipedia.

Man kan også gå direkte til sitet: <http://www.v2rocket.com/>, der nok er det mest omfattende og informative. Her er fx autentiske optagelser, der er en omfattende teknisk information, og bredden i materialerne illustreres af, at der her gives en grundig information om Tysklands angreb på Antwerpen, der blev sat ind, da de allierede rykkede frem og befriede byen. Angrebet var endnu voldsommere end angrebene på London. Dette materiale kan danne grundlag for et samarbejde mellem matematik og historie om et lille projekt.

Welcome to V2ROCKET.COM - Created for those around the world that share an interest in the infamous German V-2 missile

Dear V2ROCKET.COM; I am greatly impressed by your information on the A-4/V-2. It is with great interest that I read the comments about the launchings. I learned many new details of which I was not aware. Let's keep the information going.
—Konrad Dannenberg

"We have invaded space with our rocket and for the first time. We have used space as a bridge between two points on the earth; we have proved rocket propulsion practicable for space travel. This third day of October, 1942, is the first of a new era of transportation, that of space travel!"
—General Walter Dornberger

Kortet der er gengivet i kapitel 9, afsnit 1 er hentet fra siden:

http://londonist.com/2009/01/london_v2_rocket_sitesmapped.php

Siden kan forekomme lidt rodet, men har den store kvalitet, at man kan zoome på kortet, kortet er interaktivt, således at man kan få oplysninger om hvert af de markerede nedslag. Dette kan evt. inddrages, hvis fagene dansk eller engelsk kan inddrages i et fagligt samarbejde

London V2 Rocket Sites...Mapped

BY M@ · JANUARY 12, 2009 AT 13:38 PM · 175 COMMENTS · MISCELLANEOUS · REPORT AN ERROR ·

[View Larger Map](#)

Autumn 1944, and London was under attack from space. Hitler's 'vengeance' rocket, the V-2, was the world's first ballistic missile, and the first man-made object to make a sub-orbital spaceflight. Over 1400 were launched at Britain, with more than 500 striking London. Each hit caused devastation. The 13 tonne rocket impacted at over 3000 miles per hour. There was no warning; the missile descended faster than the speed of sound and survivors would only hear the approach and sonic booms after the blast.

Left: Occasionally, craters are still visible, as here on Leyton Marsh. Right: Often, whole blocks were obliterated, as can still be seen in this aerial image of Brockley.

It took half a year for Allied forces to neutralise the threat. In that time, some 9000 Londoners lost their lives to the V-2. As with the Blitz, South and East London took the brunt of the onslaught, with Woolwich, Ilford, Barking, Greenwich and West Ham each receiving over 20 hits. Some did make it into the central areas, however. V-2 explosions devastated Selfridges, Speakers' Corner and Holborn. That isolated Caffè Nero near the mural on Tottenham Court Road stands on the still-undeveloped site of a blast that killed nine. More seriously, 110 people were slaughtered at Farringdon when a rocket hit a packed market building on 8 March

website: link fra kapitel 9 - Binomialfordelingen – om testteori og konfidensintervaller

1945. The worst death toll of all came on 25 November 1944, when 168 people lost their lives after a direct hit on Woolworths in New Cross.

These famous tragedies are well documented, but over 500 rocket strikes, many with significant death toll, remain obscure. We've mapped out some of the impact sites above, with more to follow when we can access further information. Make sure you zoom in and check satellite view. Commonly, an area hit by a V-2 is now covered with a car park or 1960s housing estate. These areas are usually devoid of mature trees, and still stand out over 60 years on.

Notes on data sources

Records for the area then-governed by the London County Council (LCC) are most readily available thanks to Flickr uploads of [war damage maps](#) by Yersinia (see also the [London at War](#) group). Further out, we've used various [web sites](#), books and eye-witness accounts to plot additional impacts. Least information is available for those eastern boroughs mentioned above that were most badly hit. If you have any information about V-2 strikes in these (or other) areas, let us know in the comments.
